HI-FIDELITY SIGHT & SOUND

OUTDOOR WEATHERPROOF SPEAKERS

NEW!! LVR-BT4

Bluetooth Wireless Speaker
(Rechargeable)

Our team of engineers and designers have over 100 years of engineering integration with light and sound. Our innovative approach is second to none delivering the ultimate Outdoor Living Experience. "OLE" Our team can support the highest quality design, ambience and destination for every type of project. Our service and commitment is unparalleled in any arena!

Why Landscape Vibrations?

LVR-246-MBR

NEW!! Hinge door on grill for easy access

- Handcrafting each of our Hi-Fidelity speakers in Los Angeles, California using solid brass and raw copper (lifetime warranty on all finishes)
- Hi Fidelity speakers and components carrying a 2 year warranty.
- We have unparalleled customer service and can custom design whatever your design vision is.
- Our audio systems are fully scalable to accommodate any size outdoor space (as well as indoors).

What we are known for:

- We are the only company offering a lifetime warranty on our fixture finishes
- We offer a ten-year warranty on LED's
- We are the only ones with a quick connect feature that allows you to install a fixture and if you need to change out the optics or a different wattage engine, you can keep the fixture in the ground and let us know what you need
- Quick ship program available on many of our best selling fixtures
- Forever Bright LED Engine Center – 2700k standard.
- If you can draw it, we can make it
- Flex Link system – smart phone controlled lighting system that allows you to program zones, RGBW, warm white-cool white, create scenes, Bluetooth mesh technology
- Always innovating to make the best fixtures available

Why copper and brass for construction

Copper is a natural metal that has a time tested immunity to oxidation. It has been used for centuries in many applications where it was vital that rust and corrosion would not effect its function. It has survived unchanged since the beginning of time with the exception of turning a natural "Patina" or "Verde" color.

Brass is an alloy derived from copper and has the same corrosion resistant properties. Copper and Brass can never rust, rot, or corrode, even in the harshest outdoor environments. This is why these metals are really the only choice for outdoor lighting. We've all seen what happens to many other types of outdoor fixtures that have been in the garden for any length of time, they have either rotted away to dust or the painted finishes are virtually non-existent.

Landscape Vibrations stands behind our unbeatable lifetime warranty for all of our solid copper and brass fixtures. This warranty also extends to our chemical finishes which are NOT a paint or powder coat. All of our chemical finishes are basically an accelerated form of what would happen naturally, given enough time. While natural patina starts in a bronze color and then changes to Verde, our process can also create "rusty" looking elements or even black as well.

Copper and Brass are not just for "Coastal Environments." In modern landscape conditions with constant irrigation, fertilizer, and soil amendments, a coastal environment is created in almost every garden. Hardly anything will survive these harsh surroundings but you can trust Landscape Vibrations fixtures and finishes to remain beautiful and functional until the end of time!

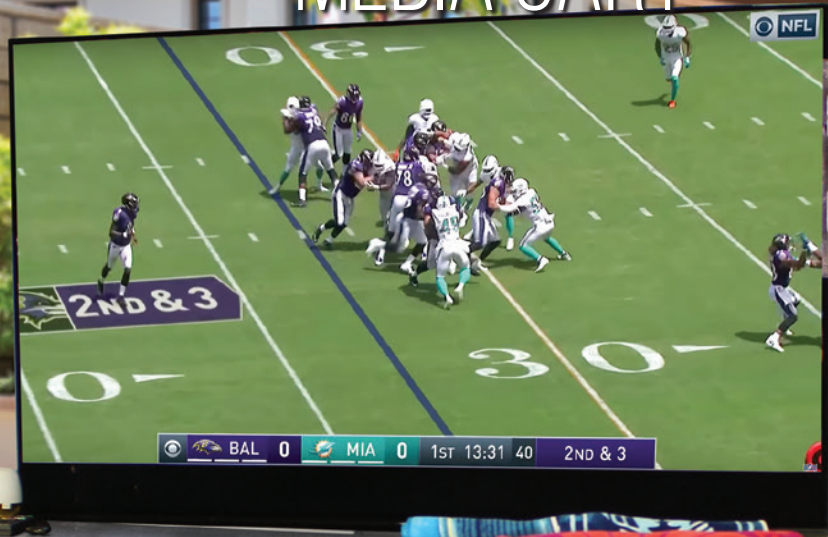

- Matte Bronze - Like an oil rubbed bronze with a living patina, our most popular finish.
- Satin Brass - A slightly raw brushed brass look which will patina over time.
- Black - This is actually a darker version of matte BRONZE better than pai
- Raw Copper - No finish at all, clean and shiny when new, aging at it's own pace.

State of the Art PVD - Superior to Stainless Steel!

Landscape Vibrations is offering new state of the art PVD finishes (physical vapor deposition) which is a manufacturing process that creates a very durable finish that looks like highly polished Chrome, Graphite, or Satin Nickel. Physical Vapor Deposition (PVD) is a process that produces a metal vapor which is deposited on electrically conductive materials. The result is a thin, highly adhered, pure metal or alloy coating. The process is carried out in a vacuum chamber, at high vacuum, using a cathodic arc source. PVD finish is commonly used for bathroom fixtures, exterior door knobs and other hardware that needs to be highly weather resistant, which is why it works perfectly for landscape lighting. Salt resistant, scratch resistant, and-water resistant keeps the PVD finish looking new for many years and is guaranteed not to patina in any outdoor environment.
